

IOT SMART WASTE MANAGEMENT FOR CLEANER CITIES

OPTIMIZING WASTE COLLECTION WITH
REAL-TIME MONITORING

PRESENTED BY:
GURAV NAINESH
KAVANI ARYA
JARIWALA AYUSH
RATHOD PRANJAL

The background of the slide is a photograph of a city street. In the foreground, there are two large wheeled trash bins. The bin on the left is dark grey and is overflowing with various pieces of trash, including crumpled paper and plastic. The bin on the right is green and has a white recycling symbol on its side. The street is paved with cobblestones, and in the background, there are city buildings and a street lamp under a cloudy sky.

WASTE MANAGEMENT ISSUES

Urban waste problems are becoming a major concern due to inefficient garbage collection, overflowing bins, and poor waste management. These issues contribute to environmental pollution, increased health risks, and an overall decline in urban living conditions.

- Inefficient Collection Systems
- Overflowing Bins
- Health Hazards
- Environmental Damage

CHALLENGES IN WASTE MANAGEMENT

- Bins Overflow Due to No Real-Time Tracking
- Trucks Follow Fixed Routes, Wasting Fuel and Time
- Municipal Resources Are Limited
- No Central System to Track Waste Levels

HOW THE SYSTEM WORKS (TECHNICAL OVERVIEW)

- Sensors in bins send updates to the cloud
- When a bin is 85% full, it is added to the collection route
- Supervisor dashboard shows bin status on a city map
- Drivers use the app to navigate and update collection

**"OUR PROJECT IS FULLY
CLOUD-BASED—NO LOCAL
NETWORK NEEDED. DATA,
APP, AND ACCESS ARE ALL
ONLINE, ENSURING
SEAMLESS CONNECTIVITY
AND REMOTE AVAILABILITY
FOR AUTHORIZED USERS"**

EXPECTED BENEFITS AND IMPACT

- Smarter scheduling improves efficiency
- Saves fuel and reduces costs
- Cleaner streets, better sanitation
- Data helps in city planning
- Lower pollution, better sustainability

FUTURE ENHANCEMENTS & SCALABILITY

- Predictions for waste levels based on trends
- Citizen reporting app integration
- Waste segregation & recycling tracking

THANK YOU
